Oral Health and the Social Determinants of Health [1]
August, 2013 Istanb..
8. The main priority for oral health interventions should be on collaborative enabling policies and research that address the main determinants of oral diseases, including unhealthy diet like excessive intake of sugars, tobacco usage, excess alcohol consumption, poor hygiene, stress and socio-economic disparities.
9. Training specialists in dental public health should include competencies in social determinants of health, comprehensive health planning and behavioral change.
