

FDI POLICY STATEMENT

The Role of Oral Health Practitioners in Tobacco Cessation

Adopted by the FDI General Assembly: 27-29 September 2021, Sydney, Australia

1

2

CONTEXT

3

Health practitioners, including oral health practitioners, have the greatest potential of any group in society to promote the reduction of tobacco use. In line with the WHO Framework Convention on Tobacco Control Article 14 guidelines, oral health practitioners should deliver brief tobacco interventions as part of their routine services in primary care.

4

5

6

7

8

9

SCOPE

10

This Policy Statement aims to increase awareness of the fundamental role of oral health practitioners to reinforce tobacco cessation in clinical and community settings. It also provides recommendations on the use of electronic cigarettes and heated tobacco products (HTPs) and develops implementable recommendations on tobacco cessation activities at organizational, community and national levels.

11

12

13

14

15

16

DEFINITIONS

17

Oral health practitioners: people involved in promoting oral health, such as dentists and other members of the dental team.

18

19

E-cigarettes: electronic devices that are designed to create aerosols by heating a solution that contains glycerin, propylene glycol, flavours, and other substances, commonly known as “electronic cigarettes,” “Electronic Nicotine Delivery Systems (ENDS),” or “Electronic Non-Nicotine Delivery Systems (ENNDS), also called “e-cigs,” “dab pens,” “dab rigs,” “vapes,” “vape pens,” “mods,” “pod-mods,” “e-hookahs,” “tanks,” or “JUUL.”

20

21

22

23

24

25

Heated tobacco products (HTPs): devices that heat tobacco to generate aerosols containing nicotine and other chemicals (e.g., flavours), namely iQOS, Ploom TECH, Glo, and PAX.

26

27

28

29

PRINCIPLES

30

Tobacco in all forms is harmful and is a risk factor that poses public health burdens worldwide. Oral health practitioners, as health care personnel who are most likely to encounter “healthy tobacco users,” have an important role in discouraging tobacco use by delivering brief tobacco cessation interventions (5A’s) or giving Very Brief Advice (VBA; 3A’s) to all patients at the first dental visit and every recall visit.

31

32

33

34

35

36 **POLICY**

37 **FDI recommends the following actions:**

38 Oral health practitioners should:

- 39 • ideally deliver the **5A's**: **ask** all patients about their tobacco use to identify
40 tobacco users, **advise** them to quit, **assess** their quitting motives, **assist** their
41 patients in quitting and **arrange** follow-up contacts;
- 42 • at least deliver the **3A's**: **ask** all patients about their tobacco use to identify
43 tobacco users, **advise** them to quit and refer them to tobacco cessation clinics
44 or services (**act**), bearing in mind that the 3A's are not recommended when
45 other tobacco cessation services are inaccessible or unavailable;
- 46 • not recommend using e-cigarettes and heated tobacco products as an
47 alternative to conventional tobaccos, nor as a tobacco cessation tool since
48 they have not been proved to be safe and these products prompt initiation of
49 combustible cigarettes in younger users;
- 50 • attend tobacco cessation training to maintain a consistent protocol in their
51 dental practice and work with interdisciplinary teams to coordinate services
52 and update tobacco cessation techniques and skills;
- 53 • with the consent of the patient, cooperate with other departments, including
54 medical practitioners, to share patients' tobacco use information and refer
55 patients to other departments when necessary;
- 56 • ensure that their working environments (e.g., hospitals, dental clinics, etc.) are
57 tobacco-free or smoke-free;
- 58 • arrange and/or participate in tobacco cessation programmes in the community
59 (e.g., tobacco cessation training for volunteers, tobacco cessation
60 programmes in schools, etc.) as primary prevention;
- 61 • assist in mass communication as part of anti-tobacco advocacy along with the
62 discouragement of the use of harmful tobacco alternatives.

63 Providers of dental education should:

- 64 • educate students on different tobacco products and their health effects and
65 integrate tobacco cessation trainings (3A's and 5A's) in their dental
66 curriculum;
- 67 • create a tobacco-free environment in their offices, buildings or campuses and
68 encourage staff members and students to quit tobacco use;
- 69 • support research that applies the common risk factor approach, such as oral
70 health promotion through tobacco cessation for prevention of non-
71 communicable diseases and oral diseases, with special emphasis on oral
72 cancer.

73 National Dental Associations and their member organisations should:

- 74 • encourage policy-makers to raise public awareness of the harm, especially on
75 oral health, caused by tobacco products via advertisement and campaigns;

- 76 • lobby the government for implementation of MPOWER measures for tobacco
77 control, the restriction of flavoured tobacco products and actions to address
78 the social determinants of health and health behaviours;
- 79 • disseminate information about successful innovations and activities for
80 tobacco cessation among dental and other health personnel;
- 81 • encourage dental public health services to incentivise dental practices to be
82 involved in tobacco cessation activities and advise the government to include
83 tobacco cessation counselling and treatments in public health insurance
84 coverage (e.g., national health insurance, occupational-based health
85 insurance).

86

87 **KEYWORDS**

88 Tobacco use, Tobacco Cessation, Oral Health Practitioners, ENDS, ENNDS, HTPs

89

90 **DISCLAIMER**

91 The information in this Policy Statement was based on the best scientific evidence
92 available at the time. It may be interpreted to reflect prevailing cultural sensitivities
93 and socio-economic constraints.
